Type: DoD EDI (C)onvention TITLE: DTEB 858.B.004010 TRANSPORTATION CONTROL AND MOVEMENT DOCUMENT (TCMD)

ITEM 3: PROPOSED WORK
Identify the action required (add, change, delete) and describe the specific work requested to the convention of standard. For convention work, identify section, page number, affected item, and any other information that clarifies the request. For standard work, identify segment, segment position, segment attribute, data element, data element attribute, and any other information that clarifies the request. Acronyms/abbreviations must be spelled out. New codes must include an expanded code definition.

ACTION: Change Description: At index 163-02, change NTE02 data element "Active RFID Tag Serial Number" data attribute from 1/10 to 1/32.

ITEM 4: REASON FOR CHANGE (business case)
Explain why you need the proposed change. Provide a complete scenario that tells what the business function, operation, or problem is that will be satisfied by a change to the convention. Technical assessment requires enough information to be able to propose an alternate solution, if necessary. Be specific. Use additional paper if necessary.

Affects systems writing and receiving 858B TCMD transactions with active RFID tag data.
The active RFID tag is migrating to an ISO/IEC 18000-7 protocol standard that requires at least 14 characters for the active tag serial number. For consistency purposes, this transaction should match the field size currently used by the RFID-III ITV Server Interface Document record descriptions for the tag ID field, which is 32 characters. This will allow for new technology growth, which may include satellite tag ID numbers.
The migration is in progress and ISO tags are currently being written.
