FY 2017

Liner Ocean Transportation Program  
Stabilized Breakbulk/Dry Cargo and  
Container Billing Rates

The liner ocean transportation program stabilized cargo billing rates establish the amount Defense Transportation System (DTS) shippers will be billed for the movement of breakbulk/dry and containerized cargo. Application of these billing rates is restricted to cargo that moves on scheduled commercial ocean liner service utilizing the Universal Services Contract (USC) and is either booked by the Military Surface Deployment and Distribution Command (SDDC) or through one of the SDDC's booking systems. These liner billing rates do not apply to direct booked cargo. See separate guidance for direct booked shipments. Charges associated with container detention are not covered by these billing rates and will be billed separately.

Determination of the applicable stabilized liner billing rate is based upon Traffic Area (TA) codes associated with the seaports of embarkation and debarkation used for the cargo movement (defined in Table 1). The billing rates are unidirectional, set separately for inbound and outbound cargo movement (i.e., the billing rate for CONUS East Coast (01) to Northern Europe (17) is different than the Northern Europe (17) to the CONUS East Coast (01) billing rate).

The billing rates are defined in terms of cost per measurement ton (MTON) with one MTON equivalent to 40 cubic feet. Beginning in 2017, several billing rate structures changes have been implemented. Billing rate commodity codes have been aligned with USC commodity codes. There are five commodity codes (see Table 2 for descriptions) for Breakbulk movements. For Container movements, there are two commodity codes which are further segmented by less than 40 feet or greater than or equal to 40 feet (see Table 3 for descriptions). Billing rates are also segmented by booking terms starting in 2017. Booking terms are arrangements with a carrier for the acceptance and carriage of freight/cargo i.e. a space reservation. Descriptions for the nine booking terms are provided in Table 4. Additional general terms and definitions can be found in Table 5.

The five nodes of a surface cargo movement include (see Illustration 1): (1) Origin Linehaul, (2) Port of Embarkation Port Handling, (3) Over-Ocean Transport, (4) Port of Debarkation Port Handling, and (5) Destination Linehaul. Linehaul describes a freight move from one city or port to another city or port, usually a truckload rather than less-than-a-truckload. Port Handling accounts for loading/unloading of a ship's cargo in port (stevedoring) and provides services for cargo receipt and transition storage. Over ocean transit is inbound or outbound cargo transported by a vessel. The liner billing rates are set to recoup costs associated with the surface cargo movement except for port handling performed under the Stevedoring & Related Terminal Services contract. Accessorial costs, or support provided by a carrier for which an additional rate is charged, are also recouped with liner billing rates. Accessorial support includes items like storage, packing, extra fuel or special handling equipment. Other factors that may affect customer costs for a movement include container type and size and cargo MTONs.

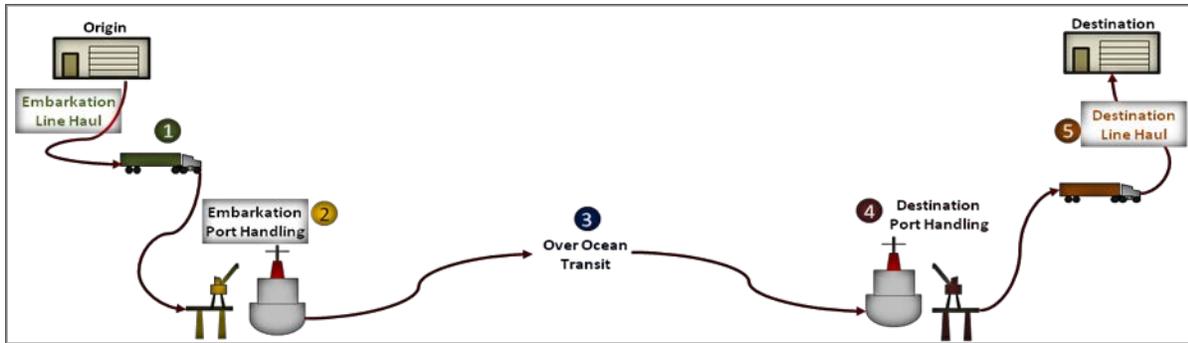

Illustration 1: Shipment Nodes

Billing rates for Traffic Area Pair/Commodity Code/Booking Term combinations that have had no actual workload for the past three years have been eliminated. If a customer ships in a Traffic Area Pair/Commodity Code/Booking Term combination without a billing rate, it will be billed at full cost recovery. In 2017, Commercial Multimodal (CMM) and One Time Only (OTO) shipments will be billed at contract cost plus 20%. CMM shipments utilize more than one type of conveyance using the Commercial Multimodal Contract. An OTO shipment is defined as a non-recurring, specialized move or a shipment with unique requirements that are not part of the USC. In other rare cases, customers may be billed using a method other than stabilized billing rates to recover extraordinary costs that were not built into the rate basis when the billing rates were originally developed.
