ITEM 4: REASON FOR CHANGE (business case)

Explain why you need the proposed change. Provide a complete scenario that tells what the business function, operation, or problem is that will be satisfied by a change to the convention. Technical assessment requires enough information to be able to propose an alternate solution, if necessary. Be specific. Use additional paper if necessary.

This change is to assist GFM to provide the BOL data to the rail carriers in a 404 5030 format. All codes are X12 codes not included in the 404 version 5030 IC and needed to pass accessorial services to the rail carriers. The codes in parenthesis are to facilitate the matching to the MFTURP-1 publication.

The 858R already has rail special handling codes set for crane at destination (495), crane at origin (500), inspector requested for loading (SUP), portable ramps at origin (CR), and portable ramps at destination (UB). It would seem the rail codes in the 404A and 858R should align for the same rail service.
