

Global Reach

Project Summary: MSC and USTRANSCOM lack mission critical TACSIT awareness, Common Operating Picture, mission planning, intelligence, contested environment communications resiliency, and ship survivability capabilities necessary to support current and future Joint and Navy operating concepts and requirements.

Global Reach Architecture Visualization

Benefit:

GLOBAL REACH will provide an enterprise Common Operating Picture (COP) and Command and Control (C2) capability in a Denied, Degraded, Intermittent and Limited (DDIL) environment not currently available to MSC as the Naval Component Commander to USTRANSCOM. It will enable global Shared Situational Awareness (SSA) coupled with the ability to provide theater and operational commanders a method to monitor and enhance their decision-making process through dynamic vessel status with automatic alerting, reporting and sensor data sharing.

Duration of project: FY24 – FY26

Participants: OPNAV N2N6Q, Programs Management, Analytics and Technologies Inc (PMAT)

Project advocacy (funding or otherwise): Military Sealift Command
