

APPENDIX GG

TRANSPORTATION METHOD CODES

A. GENERAL

The method type identifies the specific method (e.g., motor, rail, air freight, or parcel post) used for each segment of movement within the Defense Transportation System. When preparing advance Transportation Control and Movement Documents for submission to a clearance authority, the code selected identifies the method of transportation that will deliver the shipment to the port of embarkation. The most current transportation method codes are available on the United States Transportation Command (USTRANSCOM) Reference Data Management System website at <https://trdmws.maf.ustranscom.mil/>—click on “DTR Data” and “Transportation Method”, and select “Display Data” from the Action Legends box. They are accessible by all users, to include Department of Defense contractors and vendors, through the Defense Transportation Electronic Business website at <https://www.ustranscom.mil/cmd/associated/dteb/> by clicking on “Reference Data” and “Transportation Method Code”.
