

## **APPENDIX KK**

### **WATER COMMODITY CODES**

#### **A. GENERAL**

The water commodity, type cargo, and special handling codes are a five-position combination. This combination is obtained using Appendices KK, LL, and NN. The first three positions of the code identify the water commodity. The fourth position further identifies certain types of cargo, primarily those that are hazardous (Appendix NN), and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling (Appendix LL). The specific special handling requirements are further identified in trailer data (e.g., actual temperature control range, type of hazardous material, or outsize dimensions).

The most current versions of water commodity codes are available at the United States Transportation Command (USTRANSCOM) Reference Data Management System website at <https://trdmws.maf.ustranscom.mil/>—click on “DTR Data” and “Water Commodity”, and select “Display Data” from the Action Legends box. They are accessible by all users, to include Department of Defense contractors and vendors, through the Defense Transportation Electronic Business website at <https://www.ustranscom.mil/cmd/associated/dteb/> by clicking on “Reference Data”.
