TRAC2ES generated a report for "contractors" out of Afghan during the timeframe requested. It appears that no personal info protected by the PA is included. I don't see anything that jumps out at me FOIA-wise. However, when we link names to medical condition, classification, treatment, etc., I believe that to be HIPAA protected. Therefore, I suggest the attached spreadsheet contains information aligned in such a way that disclosure is prohibited by HIPAA. See: <http://www.hhs.gov/ocr/privacy/hipaa/understanding/index.html>

The request states: All documents and records that relate to and/or describe casualties and/or injuries to employees of civilian business entities performing contracts with the United States in the Nuristan, Konar, Khost, Paktia, Paktika, Kabul, and/or Parwan Provinces of Afghanistan from January 2005 through January 2010.

Keep in mind TRAC2ES offers an incomplete picture because the information only covers air lift patient movement out of theater, does not document human remains or those killed, nor do we know whether these contractors we "performing contracts with the united states", though it's highly likely anyone classified as a contractor would have that connection. Second, the request asks for documentation of casualties and injuries to employees but not to identify the employees by name, therefore, to comply with HIPPA and the spirit of the request, redaction of the names makes sense.
